

MORE DATA. ACTIONABLE INSIGHTS. BETTER MANAGEMENT.

Networked
Sensors

Cloud-Based
Software

Smart
Analytics

StormSensor provides accurate temperature, flow, and weather data at every monitoring point, every 5 minutes, every day. So you can understand how your stormwater system functions 24/7 with the most affordable remote monitoring system available.

SMART CITY TECHNOLOGY MADE EASY AND AFFORDABLE

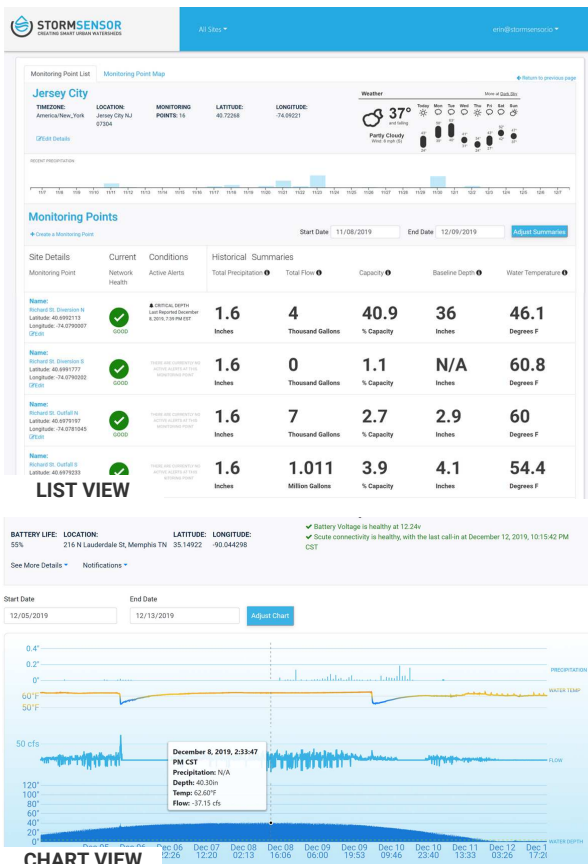

StormSensor enables you to leverage the power of advanced technology and revolutionize stormwater management in your community.

● Wet Weather Flow
 ● Dry Weather Flow
 ● Depth Alert
 ● CSO

MAP VIEW

Deploy networks of Scute™ sensors to track your stormwater and sewer system performance in the format that works best for you.

THE STORMSENSOR APPROACH

Get actionable insights about your stormwater system with our easy-to-deploy system of hardware, software, and analytics.

- Site-specific alerts and notifications add actionable insights to raw data.
- All data are correlated with local weather data.
- Scute™ sensors track water depth, velocity, flow, and temperature in real-time.
- Data are immediately accessible via our Terrapin™ cloud-based software.

BENEFITS

- **Reduce operational costs up to 86%** by optimizing models to prioritize capital improvement projects.
- **Reduce site visits up to 94%** by optimizing O&M efforts based *as-needed* maintenance, instead of *as-scheduled* maintenance.
- **Reduce urban flooding and sewage overflows up to 99%** by catching O&M issues *before* they lead to backups.
- **Reduce duplicated efforts** across teams by utilizing our continuous network and unlimited logins to gather data related to a variety of program needs, including reporting, O&M, and pollution prevention.
- **Make better informed decisions with your budget** by basing expenditures on empirical data.

APPLICATIONS

Model Validation

Green Infrastructure

Urban Flooding

Illicit Discharges

Combined Sewage Overflows

Climate Change
